

MASOOMA RIZVI

Junior Data Analyst | *Python · SQL · Power BI · Excel*
masoomaarizvii@gmail.com | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Computer Science graduate (York University, 2026) with end-to-end data analytics experience spanning data cleaning, SQL querying, statistical analysis, and business intelligence dashboard design. Built projects using Python, SQL, Excel, and Power BI across consumer behaviour and public health domains. UX/UI background adds a distinct edge in data storytelling and visual communication. Actively seeking a junior data analyst role.

EDUCATION

York University — Lassonde School of Engineering
Bachelor of Computer Science

2026

TECHNICAL SKILLS

Languages: SQL, Python, Java, HTML, CSS, JavaScript, C

Data Analysis & BI: Pandas, NumPy, Power BI, Excel, Exploratory Data Analysis (EDA), Statistical Analysis, Feature Engineering, ETL, Data Wrangling, Data Cleaning, Business Intelligence

Visualization & Reporting: Data Visualization, Dashboard Design, Data Storytelling, Visual Communication

Databases: PostgreSQL

Other Tools: Jupyter Notebook, Git, GitHub, Figma, Adobe Express, Canva

PROJECTS

Social Media and Teen Mental Health

May 2026

Excel | *PostgreSQL* | *Power BI* | [View Case Study](#)

- **Data Storage:** Sourced a dataset on social media usage and mental health, reviewed and understood the schema, and loaded it into PostgreSQL for structured querying.
- **Analysis:** Wrote SQL queries to identify behavioral patterns across age, gender, platform, and screen time, surfacing correlations between social media usage and mental health outcomes.
- **Visualization:** Built a multi-page Power BI dashboard covering platform usage, demographic breakdowns, and mental health trends; applied UX/UI principles to optimize insight legibility for non-technical stakeholders.
- **Documentation & Presentation:** Published a full project case study detailing methodology, findings, and written insights per page, demonstrating the ability to communicate data analysis clearly to a non-technical audience.

Customer Shopping Behaviour Analysis

June 2026

Python | *Excel* | *PostgreSQL* | *Power BI* | [View Case Study](#)

- **Data Cleaning & Feature Engineering:** Sourced raw transaction data from Excel; cleaned in Python by normalizing columns, imputing missing values with category medians, and engineering age group and purchase frequency features.
- **Analysis:** Loaded cleaned data into PostgreSQL and wrote SQL queries analyzing sales performance, customer loyalty segments, and top-rated products.
- **Dashboard & Insights:** Designed a 3-page Power BI dashboard and identified that 72% of repeat buyers are unsubscribed from marketing communications, flagging a high-value retention opportunity.
- **Documentation & Presentation:** Published findings and methodology as a case study on a dedicated project website, presenting insights in a clear and accessible format.

AWARDS & ACHIEVEMENTS

2nd Place — SPACE Conference Hackathon

May 2026

13-hour hackathon | Team of 7

- Conceptualized a Muslim community habit self-assessment app to help users break negative behaviour loops; leveraged research-backed statistics on guided reflection effectiveness to validate the problem and support a data-driven presentation to judges.
- Designed an analytics roadmap tracking daily intention completion rates, habit streaks, and behavioural trends over time, applying a user-centered design approach to surface meaningful patterns for end users.
